Stephen Rivas Jr.

Web & Mobile Developer
Product Manager

> Hello, I am a full stack developer and product manager who enjoys building products based on the latest, most powerful technologies. I love working with real-time APIs and applications utilizing node.js, and NoSQL datastores like MongoDB.
>
> In my experience not everyone at a company speaks everyone else's language. I aim to keep communication effective, and make sure every member of team - clients included - are able to understand each other and produce optimal solutions. I know the aspects of producing applications & product solutions from front to back. This allows me to successfully manage team members at each position along the way.
